# SUITE

policysense
Insurance Solutions

SUITE

Policysense is a suite of cloud-native modular solutions that enable and accelerate the digital transformation of an insurer's critical processes, combining the most advanced technology with deep business knowledge.
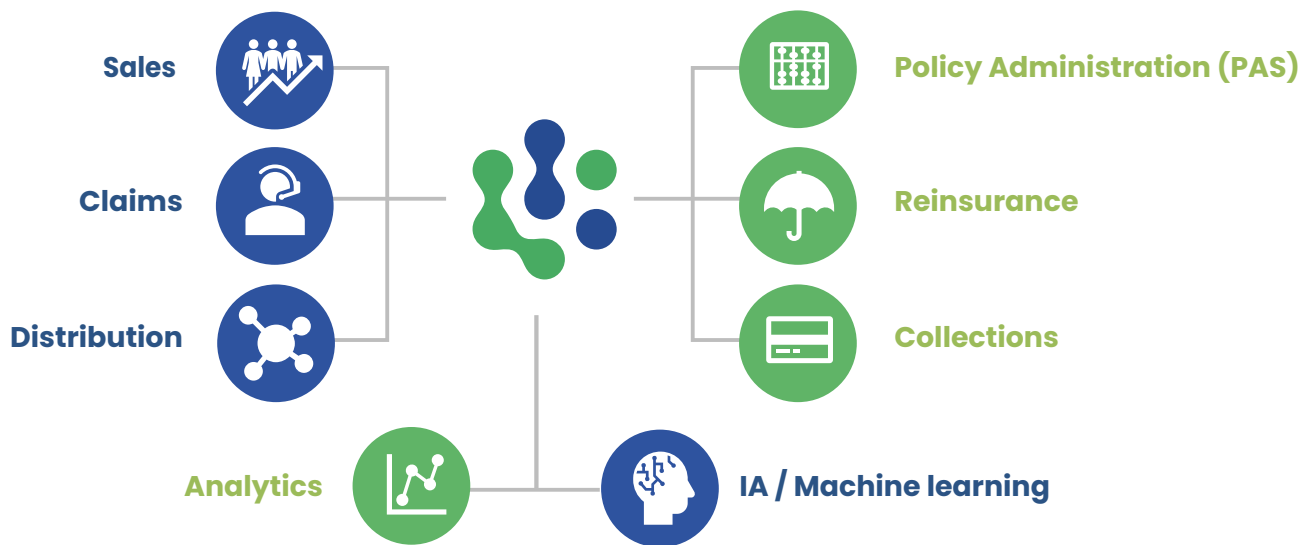

policysense

Built with 3 main objectives

Increase your sales
- Speed in responding to the market
- Ecosystems and marketplaces

Minimize risks
- Short projects, quick results
- Digitalization of processes

Reduce your costs
- Self-service and digital workflows
- Lower TCO, better ROI

Policysense covers the entire value chain of an insurer. It is fully based on low-code and is offered via a SaaS model. You will benefit from:
- Agile delivery projects that are guided by our expert staff.
- Modular solutions that can be purchased and deployed separately.
- Quick customizations based on your specific business needs.

Policysense Suite Components:

- ◎ **Sales:** Omnichannel sales solution with self-service capabilties for customers and channels.

- ◎ **Distribution:** Efficiently manage economic agreements and compensation across all types of channels, ensuring legal compliance and goal attainment.

- ◎ **Claims:** Speed and self-service for customers and suppliers through the use of digtal processes and interactions.

- ◎ **Policy Administration (PAS):** Innovation and quality of service throughout the entire policy life cycle.

- ◎ **Reinsurance:** Easily control and administer all forms of risk distribution.

- ◎ **Premium Collection:** Efficient automation for premium collection.

BENEFITS FOR YOUR BUSINESS:

Policysense Policysense allows you to adopt the advantages of digital transformation today, through:

• The optimization of your critical processes according to your priorities.

• The ability to react immediately to new opportunities in the market.

• Autonomy for quick customizations tailored to your business needs.

• No need for IT infrastructure.

• Higher return on your investment.

• Delivery and usage guidance by our experts, highly experienced in the field.

Main differentiators:

• Fully integrated yet modular coverage of the entire insurance business.

• Focused on the experience of policyholders (CX), channels (AX) and employees (EX).

• Digitalization of business processes.

• Extensive and secure integration capabilities.

• Advanced functionality based on international experience in 20+ countries.

• Regulatory support.

• Continuous improvement through new versions that are easy to receive.
  Easily adaptable through low-code.

• Cloud-native technology with a microservices architecture.

Functional characteristics

- Available for life, health, property and casualty, with advanced functionality for each case.
- Individual, group, retail, microinsurance and on-demand policies.
- Self-service capabilities throughout the entire value chain.
- Highly configurable processes by the end user.
- Compatible with traditional distribution models, bancassurance, embedded insurance, retail channels and digital distribution.
- Client-centric.
- Historical information on key system transactions.
- Enhances teamwork and collaboration.
- Multicurrency.
- Available in Spanish, English and Portuguese.
- Oriented towards ecosystems and marketplaces.

Technological characteristics

SaaS - SaaS licensing model. Lower TCO and faster ROI.

Cloud Native - Based on microservices and events, with infrastructure as code. It can scale automatically with operational continuity and high security.

DevOps - Continuous and automated deployment with automated tests, use of containers and agile methodologies.

**Low-Code** - Built on the Mendix low-code platform to provide autonomy, speed, flexibility and quality.

User experience - Responsive, intuitive, with self-service portals and native apps for iOS and Android.

Flexibility - Thanks to its microservices architecture, specific components can be purchased without having to install the rest of the suite. In the same way each component can scale separately.

Connectivity - Open APIs (REST) with API gateways, webhooks, and asynchronous events. Oriented to Ecosystems and Marketplaces.
