Insurance Solutions

Reinsurance**Co-insurance****Transforming the administration of insured risks**

Polycysense Reinsurance is a robust solution crafted to manage, enhance, and digitize all reinsurance and coinsurance operations for any insurer.

It covers everything everything from the parameterization of all reinsurance contracts and options across various lines of business, to the management of all transactions exchanged with the Policy, Claims, and Collections departments, to the utilization of workflows for overseeing accepted and ceded coinsurance and facultative reinsurance placements.

Polycysense is prepared to integrate with external electronic signature systems to verify assignment acceptances and features a data viewer, which includes Looker for data queries and analysis which can be exported to Excel, enabling the generation of comprehensive reports.

Featuring three distinct areas of action that can operate independently or seamlessly integrate, tailored to the specific needs of your insurance company

 **Automatic Reinsurance**  **Facultative Reinsurance**  **Co-insurance**

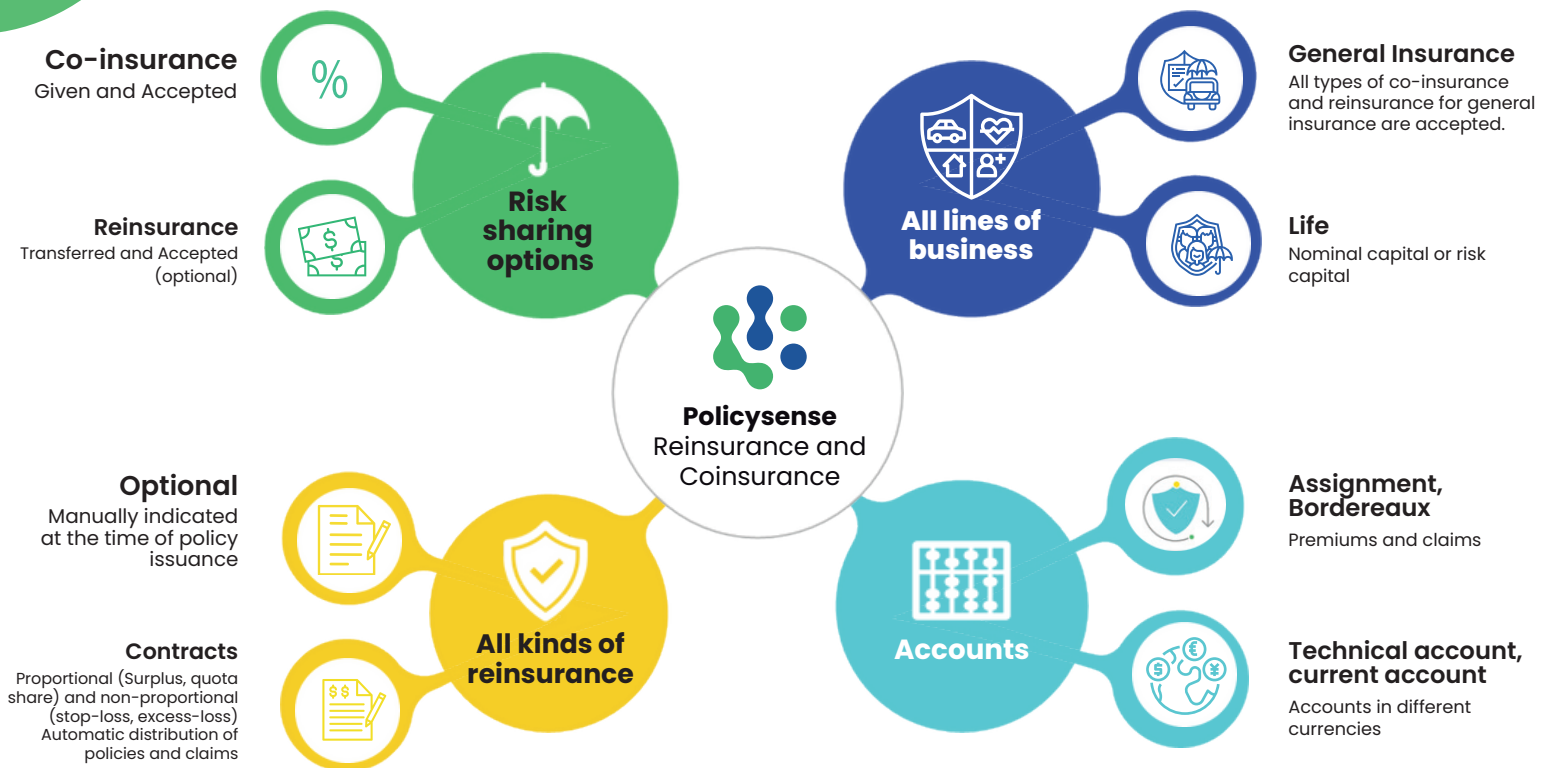

Polycysense Reaseguro facilitates a comprehensive range of functions, from contract configuration to the establishment of technical and current accounts, encompassing the generation of premium and claims transfers across all business lines.

It possesses a wide functional scope, permitting reinsurance contracts to be interconnected at the coverage level, thereby facilitating the commercial offering of products that amalgamate coverage from various reinsurance lines.

The system offers support for proportional contracts, including Quota-Share and Surplus, featuring multiple layers, as well as non-proportional contracts such as WXL and CAT, along with flexible configuration of overlay layers.

Polycysense facilitates optional ceding, encompassing both proportional and non-proportional methods, manual adjustments of proportional reinsurance distribution, and integration with policies in accepted and ceded coinsurance.

Coinsurance & Reinsurance

What is PolicySense for?

Manage reinsurance and coinsurance processes with industry-leading features, ensuring greater productivity and accuracy in risk placement with:

- Receiving synchronous or asynchronous messages from any policy, collections, and claims management system.
- Extract secure data to Excel for analysis, reporting, or creating risk files.
- Automated generation of premium and claims assignments
- Production of technical accounts and current accounts
- Rigorous control of accumulation, catastrophic events, and reinsurance intermediaries

External tools

Included, it allows for in-depth data analysis for better decision-making.

Integration with e-signature apps such as Trust or Docusign for paperless document management.

Polycysense Reinsurance

It is an advanced, non-intrusive application that can be **implemented very quickly** without intervening in the policy, collections, or claims systems. It digitizes the entire risk placement process, allowing insurers to:

- Manage proportional and non-proportional reinsurance.
- Manage automatic and optional contracts.
- Control accepted and ceded co-insurance.
- Facilitate the exchange of data on premium and claims transactions, which may come from one or more core systems.
- Define approval flows including the use of electronic signatures.
- Manage multi-currency contracts that facilitate global operations.
- Generate bordereaux of premiums and claims, as well as technical and current accounts for all companies involved in co-insurance and reinsurance operations.
