

Main modules

Dynamic workflow for approving assignments and contracts.

1. Reinsurance Lines Configuration:

- Definition of limits and specific rules for each line of business.

2. Contract Configuration:

- Management of quota share, surplus, and optional/mandatory contracts.
- Management of non-proportional contracts: excess of loss, stop loss, and excess claims.

3. Generating Assignments:

- Automation of premium and claim assignments for maximum efficiency.

4. Generation of Current and Technical Accounts:

- Accurate creation and administration of accounts, supporting accounting and financial management.

5. Authorizations and Workflows:

- Streamlined approval processes and integrated workflow management.

Cumulus Control

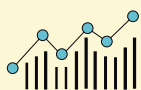

Key Features:

Integration and Control: Integration with premiums and claims is performed via asynchronous messaging or APIs, ensuring a continuous and secure flow of information. Additionally, queries can be exported to Excel through its data extractor, facilitating the preparation of detailed reports.

Rapid Implementation: The implementation process can be completed in as little as 3 months, depending on the client's scope and availability, allowing for a fast start-up and accelerated return on investment.

A component of the Polycsense suite: Polycsense Reinsurance is part of the robust Polycsense product suite, designed to support the digital transformation of insurers. Available in SaaS format with flexible monthly pay-as-you-go plans, it is both an affordable and scalable solution.

Powerful Statistical Analysis: Includes an advanced statistical analysis module through Google Looker, enabling in-depth data exploration and decision-making support.

This extension provides a clear overview of each module and its respective sub-functions, helping users fully understand the tools and options available for comprehensive insurance management.

Advanced Technology: Developed with cloud-native architecture and microservices, Polycsense Reinsurance delivers advanced security, scalability, and connectivity features. Its low-code approach enables fast, flexible, and efficient customization.
